EDUCATION

- **Bachelor of Technology — Computer Science and Engineering** 2023 – 2027 | CGPA: 7.03
Technocrats Institute of Technology, Bhopal, MP
- **Diploma in Engineering — Civil Engineering** Passed: 2022 | CGPA: 8.48
Government Polytechnic College, Ashoknagar, MP

TECHNICAL SKILLS AND INTERESTS

Languages: Python, C++, Java, Golang (learning)

Frontend & 3D: React.js, Three.js, Blender

AI / ML Ecosystem: Generative AI, Large Language Models (LLMs), RAG Pipelines, Agentic AI, HuggingFace, Groq

Databases: PostgreSQL, MongoDB, SQLite

Tools & Platforms: Git, GitHub, Linux, Docker, Cloud & DevOps (basics)

Areas of Interest: Backend Development, AI Engineering, System Design, Cloud Computing, 3d Integrated UX

Soft Skills: Communication, Teamwork, Problem-Solving, Adaptability, Quick Learner

EXPERIENCE

- **Backend Contributor — CatUserBot Organization** June 2021 – Present
Open-source Telegram Bot Framework (Python) Remote
 - Supported 1,000+ users with plugin debugging, deployment, and customizations while maintaining backend services for 15,000+ Telegram users with 99%+ uptime.
 - Contributed to 50+ code reviews, improving code quality and database reliability across distributed, user-deployed setups.
 - Hands-on experience in async Python, API integration, and open-source collaboration workflows.

PROJECTS

- **Hail RAG Engine** Python, Whisper, Vector DB, LLM
Multimodal Video Intelligence Pipeline for semantic search across visual and textual content. - Source Code
 - Built a multimodal RAG pipeline via VLMs and Whisper, enabling precise temporal semantic search across multi-hour videos.
 - Optimized vectorDB storage with custom chunking strategies, minimizing retrieval latency for complex queries.
 - Aligned cross-modal visual and textual features to map user queries directly to exact video timestamps.
- **Nidar Copilot** React, Supabase, Vercel, Groq LLM
AI-First Financial Operating System for India's unorganized sector enterprises. - Live
 - Developed a full-stack ledger application using Groq LLM to automate GST filing and loan report generation.
 - Designed a robust Supabase schema with strict integrity constraints to guarantee zero-loss accounting synchronization.
- **OS Portfolio** React 19, TypeScript, Framer Motion, Vite
Browser-based Desktop OS simulation built as an interactive developer portfolio. - Live
 - Architected a stateful Window Manager (React Context) governing z-index, drag-resize, focus, and multi-app lifecycle — mirroring OS kernel behavior in the browser.
 - Built 10+ virtual apps including a Terminal with 25+ CLI commands, dual-pane File Explorer, in-app Browser, and native games backed by a POSIX-style virtual filesystem.
 - Implemented dual-mode UX: transitions from a glassmorphic desktop to a simulated iOS home screen with app switcher and status bar on mobile.

ACHIEVEMENTS

- **8x Hackathon and Competition Awardee:** ByteQuest (1st Runner-Up, 400+ teams), Frontend Domination (2nd Runner-Up), Encode Club (3rd Place), HackDays (Best UI Award), HackData (Finalist) 2024 – 2026
- **Head of Coding Club:** Technocrats Institute of Technology — organized workshops, coding competitions, and mentored junior students in programming and software development. 2025 – Present
